Narrative analysis of WIB patterns by location, frequency and cause:		
ADDITIONAL INFORMATION		
<i>Please add any additional comments or attachments below.</i>		
<p>Heavy rain storm events causing even higher flows than normal rain storms. Identified muddy water coming into our main lift station and WWTP. Assumed a new large construction site and visited it several times. Pulled man holes and finally convinced contractor it was coming from there site. Contractor and Village got a sewer camera crew to construction site. Found main sewer on site had been broken in several spots. Clay tile with top broken in spots. It was allowing water in from the storm pond during heavy rains but than returned to normal flow when it was not raining. Village hired a contractor and replace an entire section man hole to man hole with plastic piping to remedy the problem.</p>		
Certification		
<p><i>I certify under penalty of law that I have personally examined and am familiar with the information in this report and all attachments. Based on my inquiry of those persons immediately responsible for obtaining the information contained in the report, I believe that the information is true, accurate, and complete.</i></p>
